

CAMPUS CULTURAL MANAGEMENT PORTAL

PROJECT REPORT

Submitted to Bharathiar University in partial fulfillment
of the requirements for the award of the Degree of

Bachelor of Science in Information Technology

Submitted by

NIHAL

Reg. No: 2326J1516

Under the Guidance of

Dr. SATHYA MOORTHY.S, M.Sc., M.Phil., M.C.A., Ph.D.,

Assistant Professor,

Dept. of Information Technology.

**DEPARTMENT OF INFORMATION TECHNOLOGY,
GOVERNMENT ARTS AND SCIENCE COLLEGE,
GUDALUR, THE NILGIRIS (DT),
TAMIL NADU, INDIA – 643 212.**

MARCH-2026

CERTIFICATE

CERTIFICATE

This is to certify that the project entitled “**CAMPUS CULTURAL MANAGEMENT PORTAL**”, submitted to the Bharathiar University, in partial fulfillment of the requirements for the award of the degree of **Bachelor of Science in Information Technology** is a record of original project work done by **Nihal (Reg. No: 2326J1516)** during the period 2025-2026 of his work in the Department of Information Technology, Government Arts and Science College, Gudalur, under my supervision and guidance and that this project has not formed the basis for the award of any Degree/ Diploma/ Associateship/ Fellowship or other similar title to any candidate of any university.

DECLARATION

DECLARATION

I, **Nihal (Reg.No:2326J1516)** hereby declare that the project, entitled “**CAMPUS CULTURAL MANAGEMENT PORTAL**” submitted to Bharathiar University, in partial fulfillment of the requirements for the award of degree of **Bachelor of Science in Information Technology** is a record of original and independent work done by me during 2025-2026 under the supervision and guidance of **Dr. SATHYA MOORTHY.S, M.Sc., M.Phil., M.C.A., Ph.D.,** Assistant Professor & Head, Department of Information Technology, Government Arts and Science College, Gudalur, and it has not formed the basis for the award of any Degree/ Diploma/ Association/ Fellowship or similar title to any candidate of any University.

Date:

Place: Gudalur.

Signature of the Candidate

ACKNOWLEDGEMENT

ACKNOWLEDGEMENT

‘Gratitude is the memory of the heart’.

To handle myself, I use my mind; to handle others,

I use my heart in the form of

expression of Grateful Acknowledgements.

I express my sincere gratitude to “**The Lord Almighty**” who blessed me to complete my project successfully

I express my gratitude to **Mrs. G. SUBHASHINI**, Principal (FAC), Government Arts and Science College, Gudalur without whose consent I would not have undergone this project.

I would like to express my sincere thanks to the **Dr. SATHYA MOORTHY. S, M.Sc., M.Phil., M.C.A., Ph.D.**, Head, Department of Information Technology, Government Arts and Science College, Gudalur who has given me this great opportunity to do this project along with our degree.

I wish to record my sincere and heartfelt thanks to my project supervisor and guide, **Dr. SATHYA MOORTHY. S, M.Sc., M.Phil., M.C.A., Ph.D.**, Assistant Professor & Head, Department of Information Technology, Government Arts and Science College, Gudalur for spending his/her valuable time in guiding and helping me in preparation of the project report.

I am thankful to and fortunate enough to get constant encouragement, support and guidance from all the staffs of Department of Information Technology Government Arts and Science College, Gudalur which helped us in successfully completing our project work.

I am ever grateful to my family members whose understanding and motivation enabled me to devote my attention to the project work and to complete it successfully.

SYNOPSIS

SYNOPSIS

The project entitled “**CAMPUS CULTURAL MANAGEMENT PORTAL**” is a web-based cultural event management application developed with the objective of automating and simplifying the process of managing college events. It is designed to provide a user-friendly platform where administrators can create, update, and manage events efficiently, while participants can register for events online without manual paperwork. In this system, the administrator can have complete details of all events, participant registrations, and published results in a centralized database. Moreover, when new events are organized, the admin can easily add event details including date, time, and description, and monitor the number of participants registered for each event.

This software assists in tracking the entire workflow of event management, from event creation to participant registration and result publication. It enables systematic storage of data using a MySQL database and ensures secure access through authenticated login sessions. The system also provides automated email confirmation to participants upon successful registration, improving communication and transparency.

The Campus cultural management portal is an ideal solution for colleges to manage cultural festivals efficiently and accurately. It reduces manual errors, saves time, improves data security, and increases overall productivity. By digitizing the traditional event management process, the system enhances coordination between administrators and students while ensuring reliable documentation and streamlined event operations.

INTRODUCTION

CHAPTER I

INTRODUCTION

OVERVIEW OF THE PROJECT

This project is developed to automate and streamline the management of college cultural events through a centralized web-based system. The Campus cultural management portal enables the college administration to efficiently organize, monitor, and control various cultural events conducted within the institution. The system allows the administrator to create events by specifying the event name, date, time, and description, and manage all participant registrations in a structured manner. By digitizing the event handling process, the system eliminates manual paperwork and reduces administrative workload.

The administrator is provided with full control over the system, including adding new events, updating event details, deleting events, viewing participant registrations, and publishing results. Each event is stored in a secure database with a unique event ID, ensuring proper tracking and management. The system maintains records of participant details such as name, email, and department, allowing easy retrieval and monitoring of registrations for each event. This enables the administration to track the number of participants and manage event planning more effectively.

Participants can view the list of upcoming events and register online through a user-friendly interface. Once registration is completed successfully, the participant receives an email confirmation, which serves as proof of registration. The system ensures secure data handling through authentication and session management mechanisms, preventing unauthorized access. During the event completion phase, the administrator updates the results in the system, and the information becomes accessible for viewing. The system maintains records of completed events, participant details, and results for future reference and reporting purposes. This structured documentation helps the institution analyze event performance and improve future event planning.

Overall, the Campus cultural management portal improves transparency, enhances coordination between administrators and students, reduces errors, and ensures systematic event tracking. The system provides a reliable and efficient platform for managing cultural festivals and can be further enhanced with additional features such as online payment integration, SMS notifications, and cloud-based deployment in the future.

SYSTEM STUDY

CHAPTER – 2

SYSTEM STUDY

2.1 EXISTING SYSTEM

In the existing system, cultural event management activities are maintained manually using paper-based registration forms and Excel spreadsheets. Event details, participant information, and result records are recorded in physical registers or basic spreadsheet files. Manual data processing systems provide flexibility and low operational cost when the volume of data is small. However, when the number of participants and events increases, managing the records becomes more complex and time-consuming.

The event details such as event name, date, time, venue, participant details, and results are maintained separately without a centralized system. Communication regarding event updates is usually done through notice boards or verbal announcements. The study of the existing system reveals that it suffers from several limitations that affect efficiency and data accuracy.

2.1.1 DRAWBACKS

- Difficulty in maintaining participant registration records.
- Confusion in tracking event status and participant details.
- Difficult to review registrations based on event, department, or completion status.
- Reports are maintained manually and are not structured properly.
- Lack of descriptive reports to support administrative decision-making.
- High possibility of data loss or duplication.
- Large amount of time is consumed in searching and updating records.
- Manual calculation errors in result preparation.
- No proper backup system for data storage.

2.2 PROPOSED SYSTEM

The proposed system aims to overcome all the disadvantages of the existing manual system. Since the traditional system relies on manual processing, it is inefficient for handling a large volume of event data. The proposed Campus cultural management portal automates event creation, registration management, and result publication through a web-based platform.

The system centralizes all data in a MySQL database, ensuring structured storage and quick retrieval of information. It provides secure authentication mechanisms for administrators and enables participants to register online through a user-friendly interface.

2.2.1 ADVANTAGES

- Easy searching of event details and participant registration status.
- Clear and confusion-free event tracking system.
- Easy review of registrations based on event name, department, or date.
- Automatic report generation and structured data storage.
- Reduced manual workload and improved accuracy.
- Faster processing and quick response time.
- Secure data storage with backup facility.
- Email confirmation for successful registrations.
- Reduced manpower requirements.
- Ability to handle large volumes of records efficiently.
- Improved transparency and better administrative control.

Computerization is essential in modern institutions to ensure efficiency and accuracy. If information is maintained only on paper, retrieval time increases significantly. The proposed system ensures faster access, secure storage, and improved coordination between administration and students.

2.3 SYSTEM SPECIFICATION

2.3.1 HARDWARE CONFIGURATION

Processor	: Intel Pentium IV or Higher
Hard disk capacity	: 500 GB or Above
Monitor	: 14” or Above
Internal memory capacity	: 2 GB or Above
Mouse	: Logitech / Optical Mouse
Operating system	: Windows 7 / Windows 10

2.3.2 SOFTWARE SPECIFICATION

Front end	: HTML, CSS, JavaScript
Back end	: PHP
Database	: MySQL
Server	: XAMPP (Apache Server)

2.3.3 SOFTWARE FEATURES

About PHP

PHP (Hypertext Preprocessor) is an open-source server-side scripting language designed specifically for web development. It is widely used for developing dynamic and interactive web applications. PHP code is executed on the server, and the result is sent to the client browser as plain HTML.

PHP integrates easily with MySQL databases and supports various frameworks and libraries. It provides flexibility, scalability, and high performance in web-based applications.

Advantages of PHP:

- Open-source and free to use
- Platform independent
- Supports multiple databases
- Easy integration with HTML
- High execution speed
- Secure and reliable

MySQL Database

MySQL is a relational database management system (RDBMS) used to store and manage structured data. It allows developers to create tables, define relationships, and execute queries for retrieving and updating data.

MySQL supports data integrity, indexing, and backup mechanisms. In this project, MySQL stores information related to administrators, events, participant registrations, and results.

Advantages of MySQL:

- Fast data retrieval
- Reliable and secure
- Supports large databases
- Compatible with PHP

Client-Side and Server-Side Scripting

Client-side scripting (JavaScript) executes in the browser and enhances user interaction, such as form validation and dynamic page updates.

Server-side scripting (PHP) executes on the server before sending output to the browser. It handles database operations, authentication, session management, and data processing.

The combination of client-side and server-side scripting ensures both performance and security.

XAMPP Server

XAMPP is a cross-platform web server package that includes Apache, MySQL, PHP, and phpMyAdmin. It provides a local server environment for developing and testing web applications.

Using XAMPP, the project can be executed on localhost without requiring internet connectivity.

SYSTEM DESIGN AND DEVELOPMENT

CHAPTER – 3

SYSTEM DESIGN AND DEVELOPMENT

3.1 INPUT DESIGN

Input design is one of the most important phases in system design. It is the process of planning and designing the data that is entered into the system to ensure accuracy, completeness, and efficiency. The aim of input design is to capture only relevant information from users and eliminate unnecessary data.

In the Campus cultural management portal, input is collected through user-friendly web forms such as:

- Admin Login Form
- Participant Registration Form
- Event Creation Form
- Result Upload Form
- Contact/Feedback Form

The objectives considered during input design are:

- Nature of input processing
- Validation rules for accuracy (required fields, email format, etc.)
- Proper handling of form data
- Screen design for easy understanding
- Error handling and validation controls

Proper input validation is implemented using:

- Required field validation
- Email format validation
- Password security
- Database-level constraints

If incorrect data enters the system, it can lead to wrong processing and inaccurate outputs. Therefore, careful input design ensures reliability and data accuracy.

3.2 OUTPUT DESIGN

Output design is the process of presenting processed information to users in a clear and understandable format. The main goal of output design is to provide meaningful information that supports decision-making.

In the Campus cultural management portal, outputs include:

- List of Upcoming Events
- Registered Participants List
- Event-wise Registration Reports
- Result Display Page
- Admin Dashboard Summary

The outputs are displayed in:

- Web pages (HTML tables)
- Confirmation messages
- Email notifications (Registration confirmation)

The system ensures:

- Clear formatting
- Proper alignment of data
- Easy navigation
- Fast response time
- Printable reports (if required)

Effective output design improves user experience and helps administrators manage events efficiently.

3.3 DATABASE DESIGN

Database design defines how data is structured, stored, and maintained in the system. It ensures data integrity, security, and efficient retrieval.

The Campus cultural portal system uses MySQL as the relational database management system and is developed using PHP and XAMPP environment.

Main database tables include:

- admin (Admin login details)
- events (Event details)
- participants (Student registration details)
- registrations (Event registration details)
- results (Event results)

The database design ensures:

- Primary and Foreign key relationships
- Avoidance of data redundancy
- Secure storage of login credentials
- Fast data retrieval

The database supports multiple users and ensures data privacy and security through session management and authentication.

3.4 SYSTEM DEVELOPMENT

The system is developed using:

- Front End : HTML, CSS, JavaScript
- Back End : PHP
- Database : MySQL
- Server : XAMPP

The development follows modular structure to ensure clarity and maintainability.

3.4.1 DESCRIPTION OF MODULES

1. Administrator Module

The Administrator controls and manages the entire system.

► Admin Login

Secure login with username and password authentication.

► Manage Events

- Add new events
- Edit event details
- Delete events
- View event list

► View Registrations

Admin can view all registered participants for each event.

► Manage Results

- Add results
- Edit results
- Delete results
- Publish results

► View Reports

- Event Report
- Registration Report
- Result Report

2. PARTICIPANT (USER) MODULE

Participants can access the system to view and register for events.

► User Registration

Participants register using name, email, department, etc.

➤ **View Events**

Participants can view all upcoming events.

➤ **Register for Events**

Participants can register for selected events.

➤ **View Results**

Participants can check published results.

3. Report Module

Reports provide summarized information for analysis.

Administrator Reports

- Total Events
- Total Participants
- Event-wise Registration Count
- Result Reports

User Reports

- Registered Events
- Event Results

SYSTEM TESTING AND IMPLEMENTATION

CHAPTER – 4

SYSTEM TESTING AND IMPLEMENTATION

SYSTEM TESTING

Testing is a process of executing a system with the intention of finding errors. The main objective of testing is to ensure that the developed system works according to the specified requirements and objectives.

In the Campus cultural management portal, testing plays a major role in ensuring that:

- All modules are properly integrated
- Data is processed correctly
- Outputs are accurate
- The system is secure and reliable

The philosophy behind testing is to identify errors before the system is deployed. A good test case has a high probability of detecting errors. A successful test is one that identifies previously undiscovered errors.

Test cases were created using different types of input data to verify whether:

- Registration works correctly
- Admin login is secure
- Events are added and displayed properly
- Results are stored and retrieved accurately
- Database interactions function without errors

Types of Testing

- Unit Testing
- Integration Testing
- Validation Testing
- Output Testing
- User Acceptance Testing
- Performance Testing

Unit Testing

Each module of the system was tested individually after development.

Modules tested separately include:

- Admin Login Module
- Event Management Module
- Registration Module
- Result Management Module

Each module was checked for:

- Correct functionality
- Proper database connection
- Validation of form inputs
- Error-free execution

Integration Testing

After individual testing, all modules were integrated together.

During integration testing:

- Admin dashboard was connected with event management
- Event registration was linked with participant database
- Result publishing was connected with event records

Errors related to navigation, database relationships, and session handling were identified and corrected.

User interface testing was also conducted to ensure that:

- Forms are user-friendly
- Navigation links work properly
- Pages load correctly without errors (e.g., 404 issues were fixed)

Validation Testing

Validation testing ensures that the system meets the user requirements.

Black-box testing method was applied where:

- Valid and invalid data were entered
- Error messages were verified
- System responses were checked

The system functions were validated based on:

- Correct registration confirmation
- Proper session protection
- Accurate result display
- Secure admin access

The software was accepted when it behaved according to user expectations.

Output Testing

Output testing ensures that the system generates correct and properly formatted outputs.

In this project, outputs include:

- Event list display
- Participant registration details
- Result display
- Admin reports

Outputs were tested in two formats:

1. On-screen display (HTML tables and dashboards)
2. Confirmation messages (including registration success messages)

All outputs were verified to match user requirements.

User Acceptance Testing

User Acceptance Testing (UAT) was conducted to verify the validity and reliability of the system.

The system was tested by:

- Admin users
- Student participants

Users provided feedback regarding:

- Ease of use
- Navigation
- Interface design

Based on suggestions, minor improvements were implemented such as:

- UI enhancements
- Improved button designs
- Better navigation structure

The system was approved after satisfying user requirements.

Performance Testing

Performance testing ensures that the system performs efficiently under normal usage conditions.

The Campus cultural portal system was tested for:

- Page loading speed
- Database response time
- Handling multiple registrations
- Server performance in XAMPP environment

The system showed stable performance without major delays or crashes.

Test Result

All the above testing methods were conducted successfully.

- No critical errors were found
- Minor bugs were corrected during testing
- System performance was satisfactory
- The system met all functional requirements

IMPLEMENTATION

System implementation is the process of converting the theoretical system design into a practical working system.

The purpose of system implementation is:

- Deploying the system for users
- Providing training
- Ensuring smooth transition
- Maintaining the system

The Campus cultural management portal was implemented using:

- PHP
- MySQL
- HTML, CSS, JavaScript
- XAMPP Server

Stages of Implementation

The main stages involved in implementation are:

- Planning
- Training
- System Testing
- Changeover

Planning

Planning is the first step in implementation.

It includes:

- Deciding development environment
- Database setup
- Folder structure design
- Security implementation (Admin authentication & session control)

Proper planning ensured smooth execution of the project.

Training

Before deployment, users were guided on how to use the system.

Training includes:

- How admin can add events
- How to view registrations
- How to publish results
- How participants can register for events

Clear instructions and simple interface helped users easily understand the system.

System Testing

After development, the system was tested thoroughly to ensure it works correctly in real-time conditions.

Testing ensured:

- Data accuracy
- Secure login system
- Proper database operations
- Error-free navigation

Changeover

The changeover process involved replacing manual event management with the computerized system.

Previously:

- Event details were maintained manually

Now:

- All data is stored digitally
- Registrations are automatic
- Results are published online
- Reports are generated instantly

The new system improved efficiency, accuracy, and reliability.

CONCLUSION

CHAPTER – 5

CONCLUSION

The “Campus cultural management portal” is designed to meet all the requirements of managing college cultural events in an efficient and digital manner. The system provides a centralized platform for administrators and participants to manage events, registrations, and results easily.

One of the major advantages of hosting this web-based system is that it makes event information accessible to everyone at any time. This improves communication, reduces manual work, and enhances overall management efficiency. The system is designed to be attractive, user-friendly, secure, and easy to access.

The project successfully replaces manual event handling with an automated system. It ensures accuracy, reliability, and faster processing of data.

Some special features of this project are:

- It reduces manual paperwork and manpower.
- It reduces time consumption in event management.
- It avoids redundancy of data through proper database design.
- It provides secure admin login and session protection.
- It supports easy data backup and future enhancements.
- It improves transparency in publishing event results.

Overall, the Campus cultural management portal provides an effective and practical solution for managing college events digitally.
